Juraj Londák graduated in Telecommunications at the Slovak University of Technology in Bratislava in 2009. He is a postgraduate student at the same University at the moment.

His main fields of professional interest are IMS (IP Multimedia Subsystem) security and multimedia ICT technologies (NGN (Next Generation Networks) architectures, multimedia services, application of ICT and multimedia in e-learning). He is a member of research team participating in the research projects oriented to NGN technologies and multimedia services (national and international research projects). He participate in the development of the NGNlab architecture, building of NGNLab at STU Bratislava and involvement of this laboratory to NGNLab testbed created within the European Celtic-EURECA project Netlab. He participates also in several Leonardo da Vinci projects focused on the development of training courses from the area converged ICT, multimedia services and application of these technologies and applications in m/e-learning. These courses are used in vocational training of staff of ICT companies based on face to face training, as well as in distance forms of training.

Mr. Londak is also participating in pedagogical activities at the Telecommunications Department of the Slovak University of Technology in Bratislava.
